

CONSTRUCTION, INC.

*Built with Pride*

## BERMAN THEATRE

*West Bloomfield, MI*

*Architect Joel Smith (Neumann Smith, AIA) and Todd Sachse (Sachse Construction) took a personal interest in this project. Every detail had to be not only aesthetically pleasing, but functional as well. These flying drywall headers and clouds are spectacular and an important part of the overall acoustics.*

*This dramatic main entrance was achieved using flying drywall headers. Due to limited space, extensive engineering was required for the cantilevered weight support.*

*Precision framing and layout was imperative when matching these Reglet reveals.*

*Jasman's crew bent the radius studs and formed trusses as back up for the wet drywall bent to form these clouds. They were then hung using black painted aircraft cable, giving the illusion of 'floating' clouds.*
